REPLY BRIEF TO EXAMINER'S ANSWER

Mail Stop AF
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

This Reply Brief is submitted in response to the Examiner's Answer dated July 14, 2004 [Paper No. 20]. In that answer, the Examiner restated the arguments set forth in the final rejection. Accordingly, Applicants believe that the Appeal Brief adequately addresses these issues. However, Applicant wishes to augment the Appeal Brief with respect to the Examiner's comments regarding use of a high level modulation, on page 17 first full paragraph of the Examiner's Answer. Schramm

Applicant: Joseph A. Kwak
Application No.: 10/085,203

does not disclose selecting a higher capacity encoding/modulation scheme in view of retransmission statistics. The portion of Schramm which the Examiner relies upon in that paragraph is as follows:

Retransmission techniques operating in accordance with this exemplary embodiment can be summarized by way of the flowchart of FIG. 5. Therein, the loop including steps 60 and 62 waits until a negative ARQ message (indicating an erroneously received block) is received at the transmitting entity, i.e., the RBS 22 above, but can also be the mobile station 12. In the example described in the flowchart, each erroneously received block is sufficient to trigger a selection of a new modulation scheme, at step 64, for the retransmitted block. Then the block is resegmented (mapped) into a new number of bursts at step 66. Finally, the bursts are each modulated using the outer 16QAM modulation signal points, e.g., the subset of 16QAM amplitude coefficients associated with QPSK, at step 68, and retransmission occurs.

Reading this paragraph in its entirety, it is clear this paragraph only describes using a less robust modulation scheme. At steps 60 and 62, messages indicating that blocks were received erroneously are received. It states that each of the receipt messages is sufficient to trigger the selection of the new modulation scheme. This new modulation scheme is then subsequently described as using constellation points from 16QAM modulation (high modulation) to produce coefficients for QPSK (low modulation) modulation. Each received negative acknowledgement is adequate for the Schramm invention to drop from 16QAM to QPSK. However, nowhere within this paragraph or within Schramm does it describe going from, for instance, QPSK to 16QAM, let alone basing this on retransmission statistics.

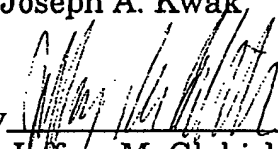

Applicant: Joseph A. Kwak
Application No.: 10/085,203

In view of the foregoing, Applicant respectfully requests that the rejections be withdrawn and all pending claims pass to allowance.

Respectfully submitted,

Joseph A. Kwak
